

Debug

You've built games, pitched them, maybe even survived multiplayer replication. Now it's time for the final boss. Fixing someone else's broken mess.

Welcome to Sprint 6. Debug & Improvement. Your client has a cursed Unreal project that doesn't even open. Several developers have tried before you and failed spectacularly. You are officially their last hope. No pressure.

Your Challenges

- Open the project (yes, that's already a challenge).
- Press Play. Nothing spawns. Fix that.
- Crystals have weird white outlines (unless you're making toothpaste ads, remove them).
- Crystal sounds? Dead. Fix it.
- Interaction? Doesn't work. Fix it.
- Puzzle? Broken. Correct inputs do nothing. Make it work.
- Optimization? Terrible? 10/20 FPS in an empty scene is not okay.

Your Features

Once the game runs again, add your own twist. A new mechanic, fun feature, something cool. It should scream; I was here. As long as it fits and has proper feedback (visual/audio), it's fair game.

Penalty points

Crashes, soft locks, horrendous optimization = penalties. If multiplayer in sprint 4 was painful, imagine a broken singleplayer project in sprint 6. If you can't explain your own code, the client might think you outsourced it.. and rate you 0/5 out of spite.

Deadline

Final delivery on Tuesday May 26th at 11:59pm.

Miss it, and the client will assume you ghosted the projet (not in a cool spectral way). Result to an automatic 0. No excuses, no extensions.

Submission Guidelines

- Deliver a zipped downloadable build (swisstransfer, google drive etc..)
- Email it to t.nanassy@pm.me
- Provide a full github repo of the project (add as collaborateur theo.denanassy@epitech.eu)

Reminder. If you can't answer questions about your own code, expect suspicion and bad grades.
Own your work.

Final Note

Debugging isn't the finish line. It's the foundation. The real evaluation is about what you fix and what you add. Make it stable, make it creative, make it yours.

Good luck, last chance developers. May your logs be clear and your crashes rare.
